LEGEND

▨ 2.5m wide boardwalk

▨ Mitigation weed control and re-vegetation area

Zone 2

General

- ☐ Length of boardwalk over dune vegetation is 127m.
- ☐ Boardwalk is 2.5m wide.
- ☐ 318m^2 of dune vegetation area may be lost to the boardwalk structure.
- ☐ At 3 plants per m^2 and at a 1:1 ratio, WBOPDC commit to return a minimum of 954 plants to the site.
- ☐ Timing for weed control and re-vegetation will depend on when boardwalk construction is completed - work will be carried out in the season after construction is complete.

Methodology

- ➢ After boardwalk construction spray at least twice for exotic weed species within Zone 2 at monthly intervals prior to re-vegetation.
- ➢ Working from the boardwalk outwards, plant a 1:1 ratio of a combination of *Wiwi* and *Pohuehue* (using approx. 80% of the mitigation plants) in the first planting season at 3 plants per m^2 within the mitigation area in existing vegetation gaps, and gaps created by the removal of weeds.
- ➢ Monitoring to be carried out over the first and second planting seasons, with in-fill of plants that do not survive.
- ➢ In the winter following the *Wiwi* and *Pohuehue* planting, add the balance 20% of mitigation plants as *Coastal Five Finger, Mahoe* and *Sand Coprosma* plantings.
- ➢ Exotic species weed control alongside general reserve maintenance to be undertaken in the second growing season.
- ➢ Removal of exotic weed species *e.g. agapanthus.*
