LEGEND

THE ESPLANADE (NB)

- 2.5m wide boardwalk
- Mitigation weed control and re-vegetation area

<u>Zone 1</u> General

- □ Length of boardwalk over dune vegetation is 44m.
- Boardwalk is 2.5m wide.
- \square 110m² of dune vegetation area may be lost to the boardwalk structure.
- At 3 plants per m² and at a 1:1 ratio, WBOPDC commit to return a minimum of 330 plants to the site.
- Timing for weed control and re-vegetation will depend on when boardwalk construction is completed - work will be carried out in the season after the construction is complete.

Methodology

- After boardwalk construction spray at least twice for exotic weed species (including Saltwater paspalum) at monthly intervals prior to re-vegetation.
- Fill-in gaps in exposed dune areas (where there is fresh sand and limited organic matter) with Spinifex and Pingao (using approx. 80% of the mitigation plantings). Planting is to result in Spinifex / Pingao plants being spaced at 3 per m². Planting ratio of 1:2 of Spinifex/Pingao suggested (as Spinifex is likely to be more sensitive to any chemicals applied for weed control).
- Plant the balance 20% of mitigation plants in the dune where there is organic matter present as a Wiwi and Pohuehue combination to result in a 3 native plants per m².
- Monitoring to be carried out over the first planting season, with in-fill of plants that do not survive.
- Exotic species weed control alongside general reserve maintenance to be undertaken in the following growing season. Fill-in plantings to be established where new plantings have failed.
